

The Story of the Chinese Bamboo

The Chinese plant the seed: they water and fertilize it, but the first year nothing happens. The second year they water and fertilize it, and still nothing happens. The third and fourth years they water and fertilize it, with no apparent results, and sometime during the course of the fifth year, in a period of six weeks, the Chinese Bamboo Tree grows roughly ninety feet.

The question is, did it grow ninety feet in six weeks or did it grow ninety feet in five years? The obvious answer is that it grew ninety feet in five years because, had they not applied the water and fertilizer each year, there would be no Chinese Bamboo Tree. All of us have had those “Chinese Bamboo Tree” experiences. We might have had a difficult assignment in math’s, english or science. We had to work at it again and again without coming up with the correct answer. Once we did finally get the answer it seemed simple and obvious. We came up with the answer not because of our intellectual brilliance but because of our perseverance.

The next time you are faced with a hard homework how are you going to use perseverance to complete the assignment?

How will perseverance and determination help you reach your goals?

How can you help your family by using perseverance?

How can you help your friends by using perseverance?

How will you feel when you accomplish your goals?

Always work hard to finish what you start. Believe in yourself and stay diligent. Write down about a time when you completed something and you felt great because of your accomplishment.
